

THE DECENTA CLASS

The elegant way of expressing your own style.

The front door showcases your home and leaves a first impression of the house and its residents. It welcomes your guests and lends your entrance a character. Different designs, colours and surface materials offer countless design options for a bespoke door, tailored to your individual requirements. With fresh ideas and new design films, we have created fantastic new panels. Always with the aim of 'expressing your own style the elegant way'.

Our Decenta range helps you to achieve this goal. The basic idea is an integrated design. In exclusive collaboration with renowned designers, we have developed new ideas, and designed front door panels that deserve the label 'innovative'. They combine functionality with measurable technical progress. Handles are part of the design concept right from the start. Thus, we offer all panels with handles already mounted. This means that the handle's position is further away from the keyhole. The advantage: more freedom of movement when unlocking the door. This example clearly shows what the symbiosis of form and functionality can achieve.

Colours and surfaces give your home individuality and personality. Colours and design films give the surface a specific appearance and thus a specific effect. Metal micro-particles give the powder surface an elegant, shimmering appearance. Robust fine-structure surfaces meet the highest standards of scratch and impact resistance. Design films create surfaces that are very similar to veneered wood surfaces in terms of structure, appearance and feel. As a design element for handles, inlays and decorative features, the colour black enhances the overall impression – particularly in combination with our design films.

When it comes to security, our premium product, the double-sided attachment panel, is the perfect choice. Even in the standard version, high-quality toughened glass is used for the outside and inside panes. Triple safety glass and RC2 certification offer additional protection and deter uninvited guests.

Many house facades feature wide entrance areas, which can be perfectly designed with additional elements or sidelights. Our designers agree: 'The larger the front door, the more restrained the panel design should be.' Solid front door panels are particularly well suited for this, either smooth and accentuated with a front door handle, or accentuated with fine grooves. In both cases, the double-sided attachment panel ensures pure elegance, offering excellent thermal insulation. Sidelights allow natural light and brightness into your hallway. No need to wait any longer! Configure your dream door on your tablet or PC. Get an idea of how it will fit into the facade of your house. Our front door configurator is ideal for a photorealistic representation of your future entrance area.

Kindest regards
Your adeco Türfüllungstechnik GmbH

Since 1994, our collaboration with professional designers has resulted in pioneering designs. The Opal model, designed by Jochen Flacke in 1994, was a new approach of what was then a very traditional, classic design.

In 1998, Sabine Bischof designed the Indura model. She was the first to use stainless steel in the design of front doors. With the Penda model, Detlef Rahe continued the reduction in design language in 2003. He emphasised vertical lines with the aim of matching the front door with the architectural style of a house facade. In 2007, the Metris line emphasised horizontal lines. For the first time, fine, elegant stainless steel inlays were used. Sabine Bischof's design was awarded the Dr. Hahn Design Prize in the same year. The Alliso model, also developed by Sabine Bischof, follows the architectural trend of emphasising horizontal lines more strongly.

In 2013, Ms Bischof took the design approach to the next level, creating the Talio model for entrance systems with additional elements. In 2016, Sabine Bischof created the Bentano design, which reduces the design elements to the essentials. The handle is not fixed on the door panel as a separate component, but is recessed into it. The Bentano was awarded the Iconic Award and the Red Dot Design Award Winner 2017 label. In 2019, Sabine Bischof, Kressel and Schelle designed the Swing model. This created a symbiosis of retro style and purism. The organically designed handle gives the surface a three-dimensional look.

The year 2025 was marked by the further development of design film-coating, and the new Linea series designed by rahe+rahe. The series focuses on flush inlays and the new Luna handle disc design.

or black RAL 9005
fine structure

knob HA 445, ø 70 mm
matt brushed stainless steel
or black RAL 9005
fine structure

handle disc Luna HA 440
ø 200 mm
silver anodized

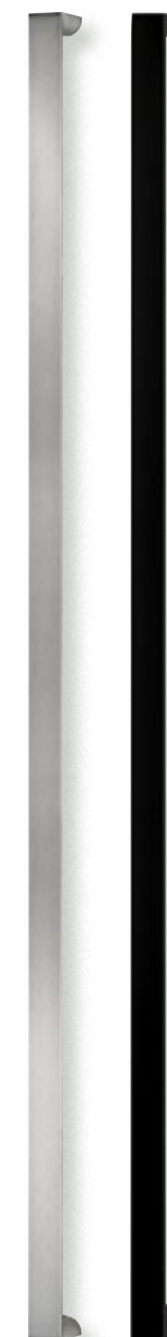

handle disc Luna HA 440
ø 200 mm
black anodized

handle bar (round)
matt brushed stainless steel
or black RAL 9005 fine structure
with straight handle supports

HA 452	length	600 mm
HA 453	length	800 mm
HA 454	length	1.000 mm
HA 455	length	1.200 mm
HA 591	length	1.480 mm
HA 511	length	1.554 mm
HA 457	length	1.600 mm

handle (semi-circular)
matt brushed stainless steel
or black RAL 9005 fine structure
with straight handle supports

HA 286	length	880 mm
HA 312	length	1.040 mm
HA 284	length	1.280 mm
HA 289	length	1.480 mm
HA 351	length	1.500 mm
HA 293	length	1.600 mm
HA 352	length	1.650 mm

This is a selection of front door handles and knobs that represent our idea of integrated design. They are mounted on the panel by us. Other lengths are available on request.

EXAMPLES i-CONCEPT

Are you planning a generously laid-out entrance area with an extra-high door panel? We are happy to adapt the design of our panels to your entrance. It is possible to move the glazed insert, change its width and height, and extend the decorative features. We are happy to provide further assistance in customizing your panel (surcharges may apply).

Penda | glazed

handle area Oak amber
satinato
with integrated handle
black

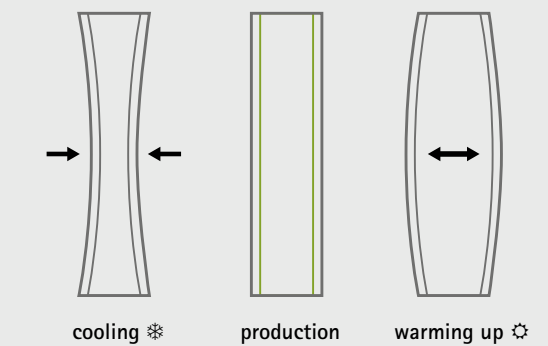

Individual glazing

Even with several glass inserts, the individual insert is held in place by the spacers. The facing tape or sealing seam remains concealed even with clear glass panes.

Toughened safety glass (ESG)

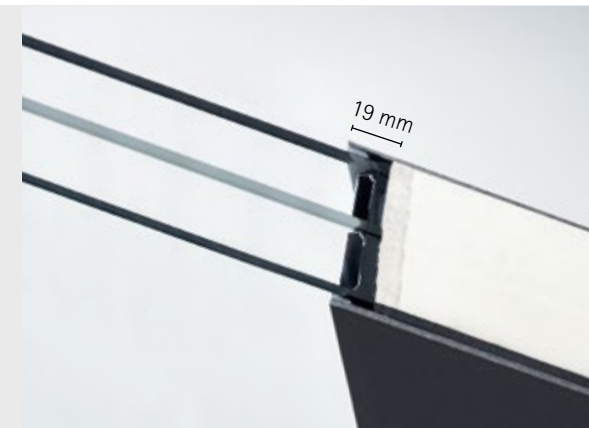

In recent years, the requirements for front door glazing in terms of protection against injury and burglary have increased on the European market. Thicker panes increase the risk of overload breakage. To minimise this risk, adeco generally offers toughened safety glass (ESG) as standard for all panels > 60 mm thickness. Both the outer and inner panes of a triple insulating glass are supplied as toughened safety glass.

DO YOU KNOW THE CORE VALUES OF OUR FRONT DOOR PANELS?

19 mm glass inset

Due to the larger glass inset, the edge seal is 4 mm thicker all round. This results in a lower risk of leaks due to pumping effects as a result of temperature stress with thicker panes (the pane does not become cloudy or etched, even during long periods of use).

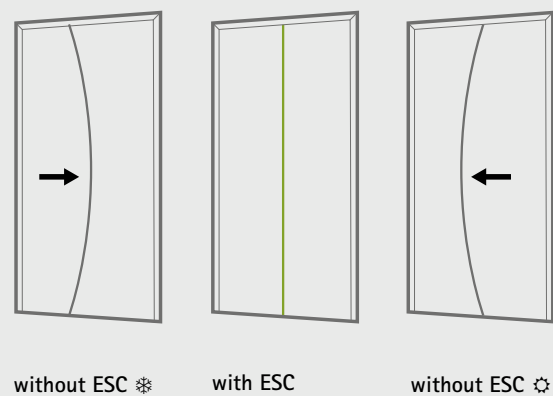

The ESC feature – open your front door the easy way

Due to the demand for ever better insulation properties in front doors, the installation depth of the profiles and therefore also the thickness of the infill panels have increased significantly in recent years.

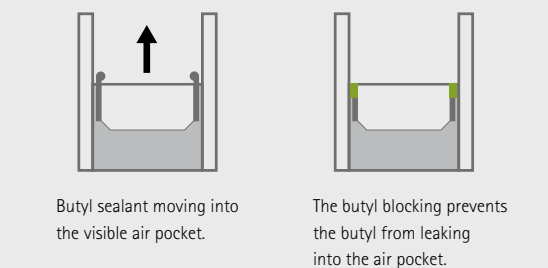

Depending on the design and material of the infill panel and profile, and particularly in the case of dark colours and closed panels in exposed positions, different interactions may occur, which can lead to a warping of the entire door leaf. Where technically feasible, adeco produces panels with ESC composite as standard:

- The patented elastic sandwich composite (EP3 593 989) for exposed locations and dark colours.
- Thanks to the elastic sandwich compound, the forces caused by solar radiation or the effects of cold temperatures are reduced to a minimum.
- The increased smoothness is due to the cellulose strips embedded in the foam core.
- Standard for closed and glazed aluminium attachment panels.

Butyl blocking

In insulating glass panes, a pumping effect occurs in the space between the panes due to the expansion of the air when heated, and contraction when cold. The thicker the pane, this effect can cause the butyl sealant to move towards the space between the panes. A further sealing layer (the butyl barrier) prevents butyl from penetrating into the space between the panes and thus keeps the edge seal clean in the long term. It is standard for all glazed front door panels.

Foam-filled glass rebate

The foam reliably prevents cold bridges where condensation can form. It also results in better overall insulation.

HOME COMFORT IN FRONT OF YOUR FRONT DOOR

For attractive home comfort outside, we recommend the modular storage solutions from constila. They combine high functionality with minimalist design.

As soon as you lift the lid of the storage container slightly, two gas pressure springs support the complete and effortless opening. Attaching the bin lid to the storage container lid makes opening it child's play. The gas springs hold the bin open until you close it again by pulling it lightly. This allows our customers to dispose of their rubbish without any physical effort.

CONFIGURATOR

Are you still unsure which model best suits your home? Still undecided about which surface is right for you? Perhaps you have already found your dream front door, but now want to see how it would look in your entrance area? Become a designer yourself!

Visit the configurator on our website www.adeco.de/en. Combine surfaces, colours, glass, door handles and extras as you wish. One click is all it takes to open the **front door configurator**. We will guide you through the configurator step by step. In just a few minutes, you can design a realistic image of your future entrance area, just as you imagine it.

This QR code will take you directly to the configurator:

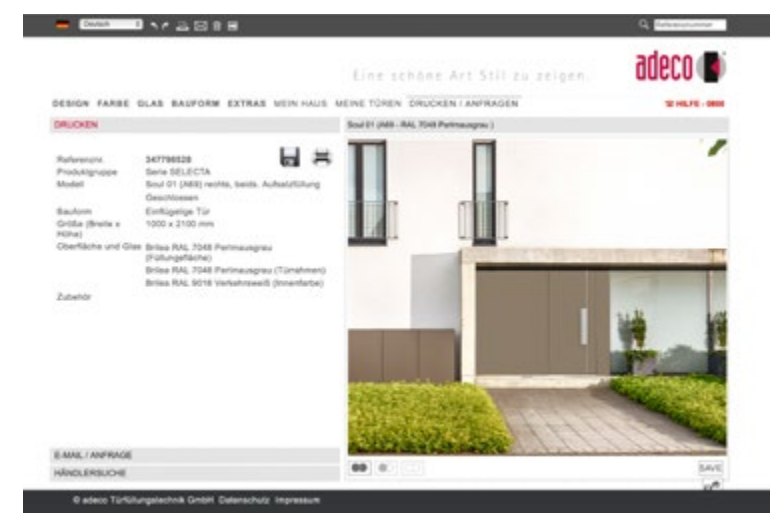

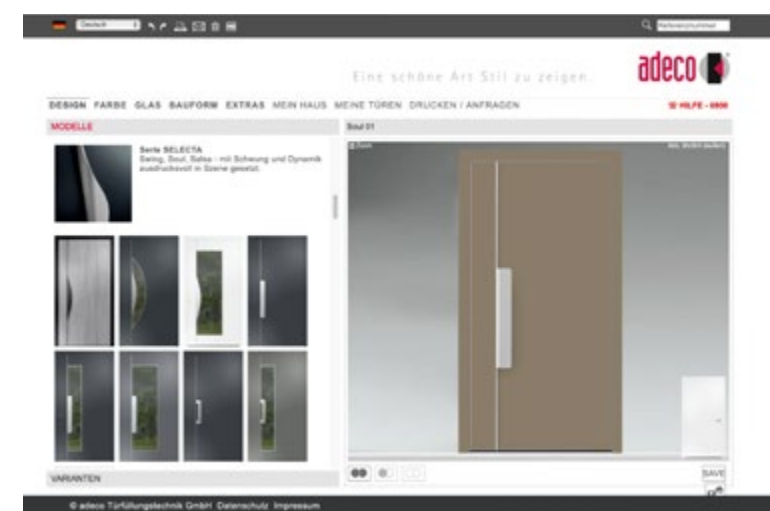

CARE INSTRUCTIONS

For copying and printing reasons, the appearance of colours, and decors in the illustrations of panels and handles is without engagement. For an exact colour adjustment, we recommend using original RAL colour fans or adeco colour sample cards. The effect of glazings and colours also depends on different lighting conditions, time of day and time of year and the individual location.

LED Lighting
In order to extend the life cycle of LED lightings, we recommend using them from dusk till daybreak. Especially dark front door colours in exposed locations with substantial sun radiation result in higher temperatures of the LEDs, reducing their durability. New LEDs can be ordered from specialist shops.

The face widths of the casement profile vary, depending on the installation situation and the profile systems used for casement and sash. The required panel width also depends on the profile system you use. The appearance of an front door may change since the individual dimensions of your front door may differ from the ones in our catalogue.
